# Competing or Complimentary Expectations

- Environment of Increased Fiscal Responsibility/Accountability
- There is a shift in the reporting expectations from funding sources
  - Impact based measurement
  - Leads to value based measurement

# Quality and Availability of Data

- Varied levels of data availability and quality in the non-profit sector
- Increased detailed information sharing for evaluation is required
- Legislation & contracts may or can enable.

# The Big Question

- Is Government's role to:
  - A. Foster and Support Non-profits as the primary source of delivery
  - B. Purchase Individual Outcomes from any source who can measure the impact and value
  - C. Create the Environment for Rigorous Outcome Evaluation through contracting practices and data sharing legislation/regulation
  - D. All of the above

Thank You

Ron Anderson
